

Day 3 - Agenda

- ✓ Code provenance & licensing awareness
- ✓ Responsible AI usage
- ✓ What Copilot can & cannot do
- ✓ Best practices Recap.
- ✓ Stay current with Copilot
- ✓ Capstone Project → Learn / Actions

[80% a func ✓] ← Copilot
(You)

Code Review

Testing

- Security validation
- dependency validation
- Architecture review
- CI/CD flows.

→ "Code Provenance" & Licensing Awareness.

npm install <some-amazing-dep> ✓ "used"
or
Install Nubret package.

"AI-generated does not mean license-free, risk-free, or review-free."

Responsible Copilot — 3 IMP

- ① What Context?
- ② What output?
- ③ What happens before that output reaches production?

✓ Principal #1: Protect 'Sensitive Info'

#2: Verify the output

#3: Apply Normal Engineering Control.

#4: Maintain Human Accountability.

#5: Give Copilot Appropriate Context.

- | CAN |
|----------------------------|
| ✓ Code Generation |
| ✓ Code Explanation |
| ✓ Test Generation |
| ✓ Generating documentation |
| ✓ debugging assistance |
| ✓ Suggesting API usage |
| ✓ Repo context |

- | CANNOT |
|---|
| ✓ correct |
| ✓ secure |
| ✓ optimized |
| ✓ compliant |
| ✓ properly licensed |
| ✓ compatible with every internal standard |

Best Practices - Recap.

④ Validate → That it works?

Run:
 Compilation
 unit Tests, Integration Tests
 security checks
 static analysis

⑤ Integrate

source code, PRs, Peer review, CI/CD, approval gate, deployment controls.

Stay updated with New changes.

- ① Github Copilot Documentation.
- ② Github Changelog.
- ③ IDE Release Notes
